

## **Amendments to the Claims**

The following listing of claims will replace all prior versions, and listings, of claims in the application.

### **Listing of Claims**

1           1 (Previously Presented). A speech recognition system, comprising:  
2           at least one recognizer to produce output signals from audio input signals based  
3           at least in part on speech models and a grammar file, the grammar file including at least  
4           one command syntax;  
5           a feedback module to generate feedback data, the feedback module modifying  
6           the speech models and the grammar file based on the feedback data to improve the  
7           performance of the at least one recognizer; and  
8           a controller adaptable to select one recognizer based at least in part on the  
9           feedback data from the at least one recognizer for an input utterance, the selected  
10          recognizer performing most accurately for the input utterance among the at least one  
11          recognizer.

1  
1           2 (Previously Presented). The speech recognition system of claim 1, wherein the  
2           controller is operable to coordinate production of the output signals.

1

3 (Previously Presented). The speech recognition system of claim 1, wherein the controller is adaptable to provide the feedback data to the at least one recognizer wherein the at least one recognizer is operable to receive the feedback data.

4 (Cancelled).

5 (Previously Presented). The speech recognition system of claim 1, wherein the controller is adaptable to store the feedback data in a storage.

6 (Cancelled).

7 (Previously Presented). The speech recognition system of claim 1, wherein the feedback module modifies the grammar file by updating the grammar files to include a weighting for possibilities based upon the feedback data.

8. (Cancelled).

9 (Previously Presented). The system of claim 1, where the feedback module is adapted to generate the feedback data based on internal analysis of at least one of the grammar file, dialog progression, or the output signals.

10 (Previously Presented). The system of claim 1, wherein the feedback module is adapted to generate the feedback data based on external inputs comprising at least

3 one of an annotated grammar file or information received through an application  
4 programming interface.

1

1 11-30. (Cancelled)
